DOMAIN NAME REGISTRATION & WEB HOSTING

Domain Name Registration : **Domain registration** is the **process** of **registering** a **domain name**, which identifies one or more IP addresses with a **name** that is easier to remember and use in URLs to identify particular Web pages. We help individuals and organizations to register a domain name that has an extension like .com, .org, .in, .net, .info, .biz, .us, .mobi, .pro, .online, .store, .name, .tv etc. depending on your choice.

Web Hosting : To make your **Website** visible to the world, it has to be hosted on a **Web Server**. We use **Linux Operating System** and **Apache Software** for our Hosting Service.

We will register a domain name for you, setup the server needed to host your Company Website and create the initial website specific email you wish for your company (example: you@yourdomain.com).

All these services are renewable on yearly basis. We will inform you one month prior to expiry date of domain and hosting.

INTRODUCTION:

Sir / Madam,

On behalf of the **Team Webina**, here at **Webina Tech**, I want to thank you for the opportunity to earn your business as your provider of web design services. There are thousands of companies offering these services that you could have chosen, and yet here we are, with an opportunity to earn your business.

I've included a lot of detail in this proposal to make it abundantly clear to you that what Webina Tech will do for you.

PROJECT SUMMERY:

Webina Tech will build your website using the CI Framework (CodeIgniter). CodeIgniter is used by more than a million brands around the world, and is known for it's ease of use, security, and scalability.

Our team is proficient in development using CI Framework. Based on your needs, we feel that CodeIgniter Framework is the best platform for your website.
